

National Severe Weather Warning Service

Chief Forecasters Assessment

As temperatures fall again this evening and winds remain very light, patchy freezing fog is expected to become more widespread. As is usual in a fog situation, there are uncertainties regarding just how extensive and dense the fog will be. The possibly patchy nature could lead to tricky driving conditions.

The Met Office have issued a **Yellow Warning of Fog**

Valid from **18:05 on Wed, 12th Dec 2012** until **11:00 on Thu, 13th Dec 2012**

Patchy freezing fog, already affecting parts of northeast England is expected to become more widespread and locally dense on Wednesday evening and to persist into Thursday morning. A few patches of fog may persist through Thursday afternoon.

With visibility reduced to below 100 m at times, the public should be aware that this may cause disruption to transport.
